

TelOS Protocol: TOP

A decentralized open communication network

A decentralized open communication network that provides messaging, calling, VPN, streaming, CDN, IoT data sharing, storage and other decentralized communication services.

VPN

VoIP

Video

CDN

Storage

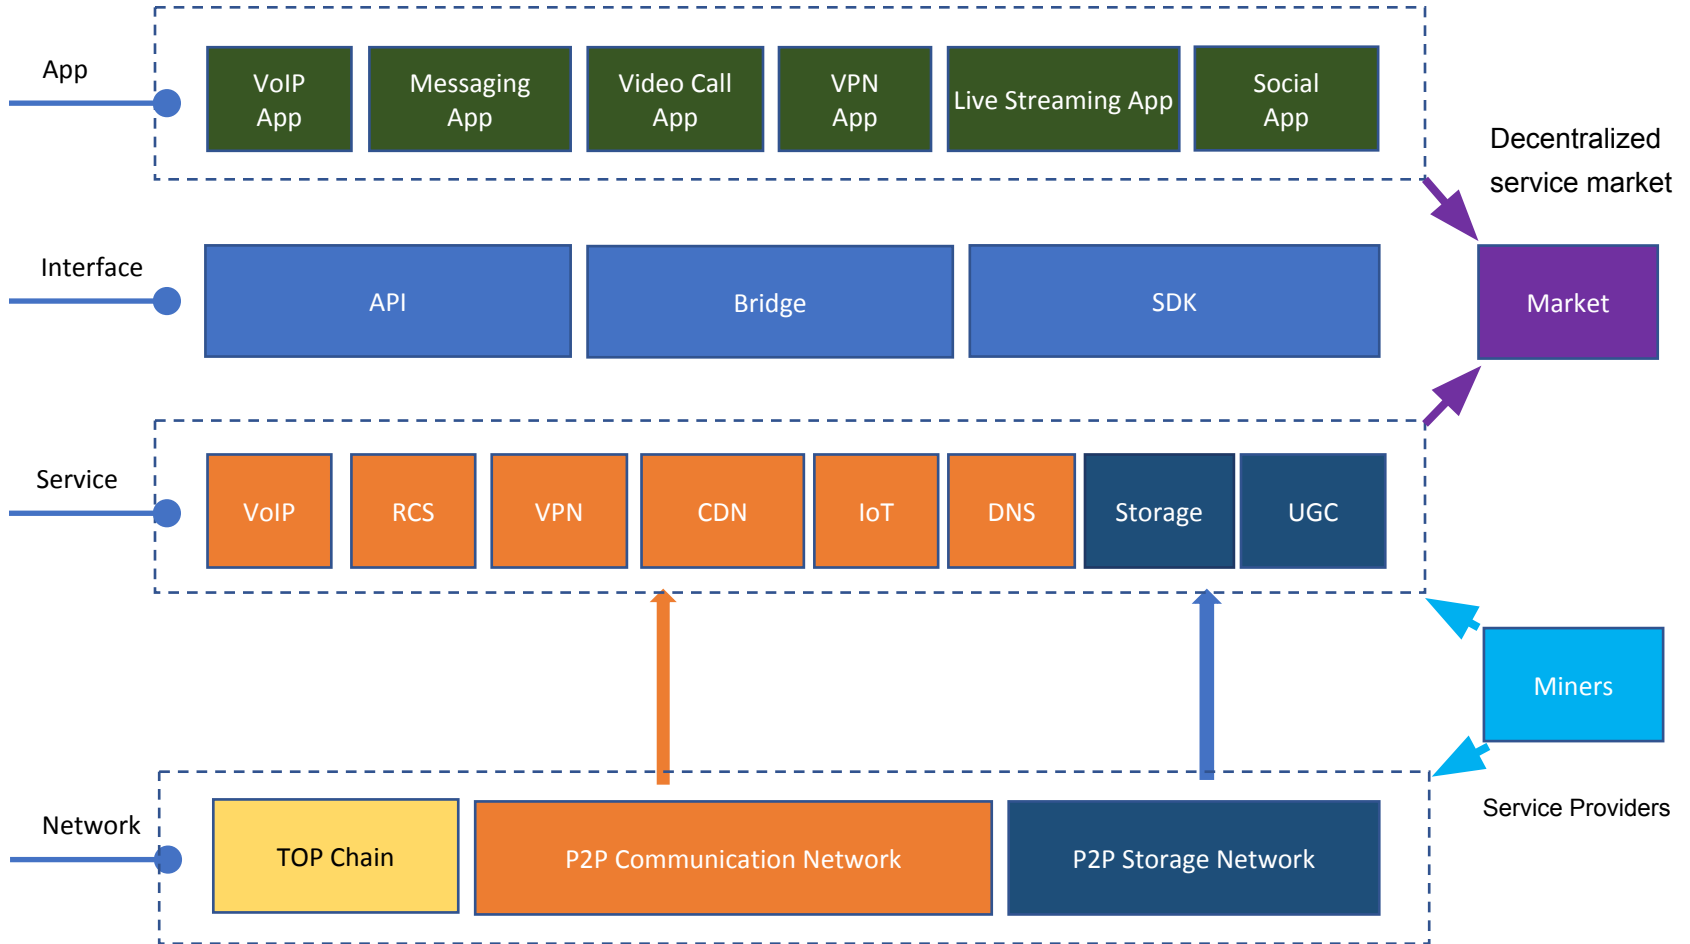

Messaging

Streaming

IoT

TOP Network

We provide full-stack cloud communication service. We free app developers from developing and building their own communication stack.

Standard communication protocol makes all Dapps interoperable.

A blossoming ecosystem benefits end users, Dapps and service providers (miners).

Core Value

Comm Services

- Messaging
- Voice & Video
- VoIP
- VPN
- Streaming & CDN
- Storage & UGC
- IoT Data Sharing

Standard Protocol

- RCS International Comm Standard
- Interoperable

Ecosystem

- A decentralized market connects Dapps and providers
- TOP token brings end users, Dapps, and service providers (miners) together to build an ecosystem

Advantages

VPN

PSTN
VoIP Call

Video
Call

Storage & UGC

Any Apps with
Communication Features

CDN

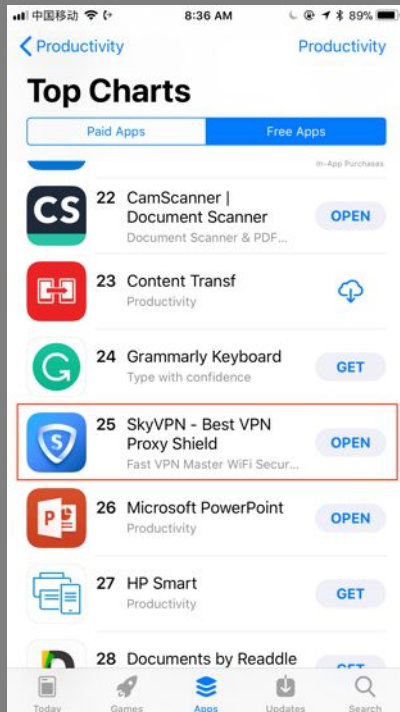

Messaging Apps

Live Streaming

TOP Team has developed three communication apps - Dingtone, CoverMe and SkyVPN – that altogether have more than 50 million users. These apps will be the very first Dapps in the TOP ecosystem. Once TOP is officially launched, they will bring massive volumes of business to TOP.

► Dingtone – Decentralized Messaging App

Dingtone has over 36 million users who generate 1 billion minutes of VoIP calls annually and 1 billion messages daily. Dingtone will become a decentralized messaging app once it moves to TOP.

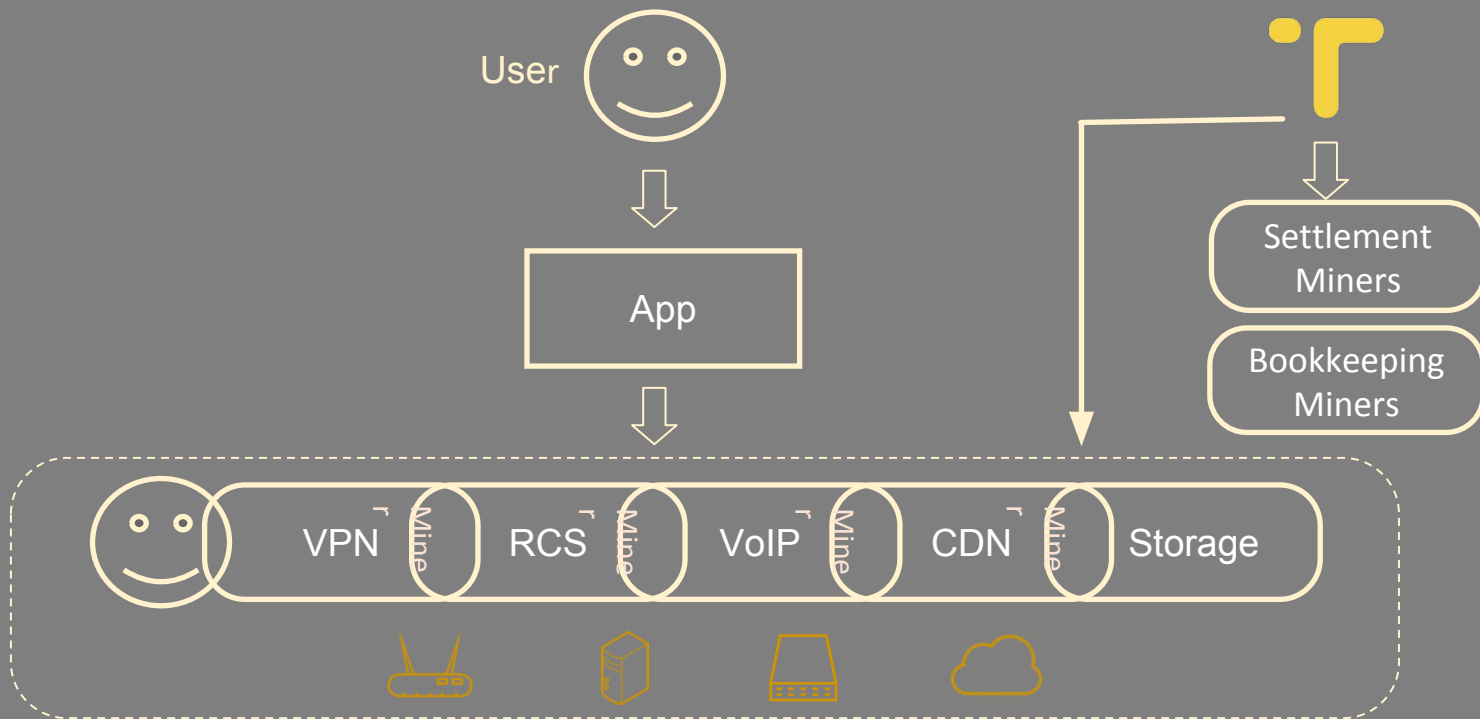

► CoverMe – Secure Messaging App

CoverMe is the first messaging app implementing end-to-end encryption technology (earlier than Telegram). CoverMe will move to TOP with its 4 million users.

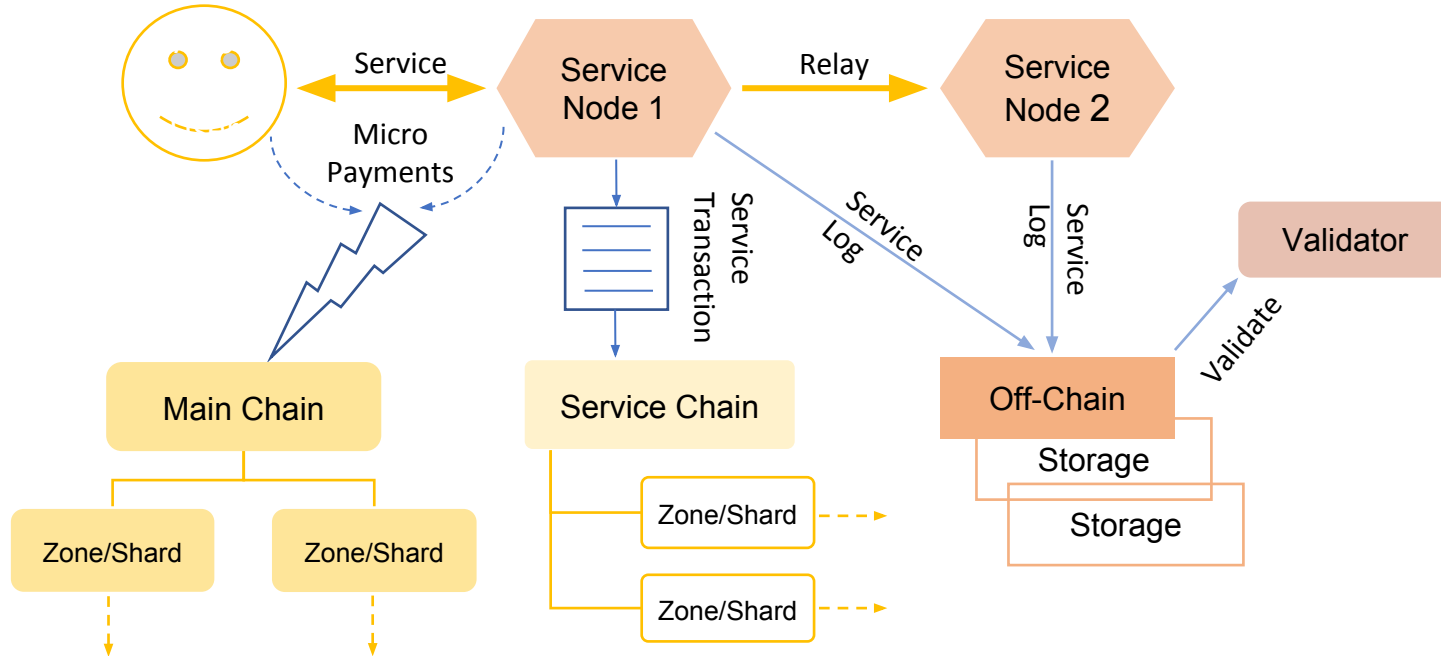

► SkyVPN – Decentralized VPN Service

SkyVPN has over 9 million users and consumes 180 TB of VPN traffic every day. SkyVPN will become a decentralized VPN app on TOP.

Miners are the foundation of the blockchain ecosystem. The cloud communication services provided by TOP include RCS, VoIP, VPN, Streaming, CDN, IoT, Storage and more. Each of them has **significant market potential**. Miners can use such devices as routers, computers and servers. **One device can provide multiple services** so miners can easily earn money in the ecosystem. **End users can be miners as well.**

The volume of transactions in the communication industry is huge. For example, SkyVPN books over 100,000 billing units per second (512 KB VPN traffic per unit). TOP Chain is designed to settle **millions of transactions per second (TPS)**.

► Multi-Chain Architecture

- Separate settlement from service chains
- One service chain for one TOP service
- Service chain: PoB, PoSt; Main Chain: PBFT-DPoS

► Horizontal Scale

- Accounts are organized into zones.
- Each zone has multiple shards (100 x scale-up).
- Intelligent routing between shards

► Layered Ledgers

- Detailed service logs are saved in the decentralized storage.
- Service transactions are booked on the service chains.
- Payment is settled on the main chain.

Team

Steve Wei
CEO

- An serial entrepreneur with a track record of success
- One of WebEx's earliest employees and major technical contributors
- Founded Cenwave in 2004, acquired by Huawei in 2010
- Founded Dingtone in 2012

Noah Wang
CMO & BD

- U.S. West Coast Regional Head of Starr Strategic Holdings
- Managerial experiences at PwC and ICBC
- Charter member of HYSTA and CKGSB YEB
- Yale MBA
- Mensa International member

Kelven Yang
Chief Architect

- Chief Architect and founding employee at WebEx
- Joined Cloud.com in 2009; core member on the R&D team
- Co-founded Dingtone in 2012

Peter Wei
Leader of Engineers

- A network security expert holding 33 patents
- One of WebEx's earliest employees
- Director of R&D at Fortinet, Technology Architect at TrendMicro

Taylor Wei
Leader of Platform

- Expert in cryptography and secure communication
- Mobile development manager in WebEx
- Co-founded Dingtone in 2012

FENBUSHI
CAPITAL

Starwin Capital
星合资本

Gong Hongjia
Co-founder
Hikvision

Wu Yongming
Co-founder
Alibaba

Mission Statement

TOP

Infrastructure for Communication and Social Apps

EOS

- Blockchain OS
- Infrastructure for Dapps

IPFS

- Decentralized Storage
- Infrastructure for File Storage and Distribution

TOP

- Decentralized Communication
- Infrastructure for Communication & Social

Roadmap

Q3, 2017

Conduct research on the decentralized VPN service

Q4, 2017

Start designing TOP architecture

Feb, 2018

Start developing TOP Proxy and TOP Chain

Q3, 2018

Launch a test network of TOP Proxy

Q3, 2018

Launch a test network of TOP Chain

Q4, 2018

Release BitVPN decentralized VPN service

Q4, 2018

Launch the first trial of TOP Chain

Q1, 2019

Release TOP Communication Services

Q1, 2019

Launch a later-stage trial of TOP Chain

Q2, 2019

Officially launch TOP Network and TOP Chain

Q3, 2019

Release TOP Messenger and TOP IoT

The background is a dark, deep blue space filled with numerous small, bright white and blue particles. Several long, flowing trails of these particles sweep across the frame, creating a sense of dynamic movement. A prominent, bright white and blue light source is positioned in the lower-left quadrant, casting a strong glow and illuminating the surrounding particle trails. A horizontal band of reddish-pink light stretches across the middle of the image, intersecting with the particle trails.

Layer2 on TOP

- Leverage Off-chain Power
- New & Simple Layer2 Design

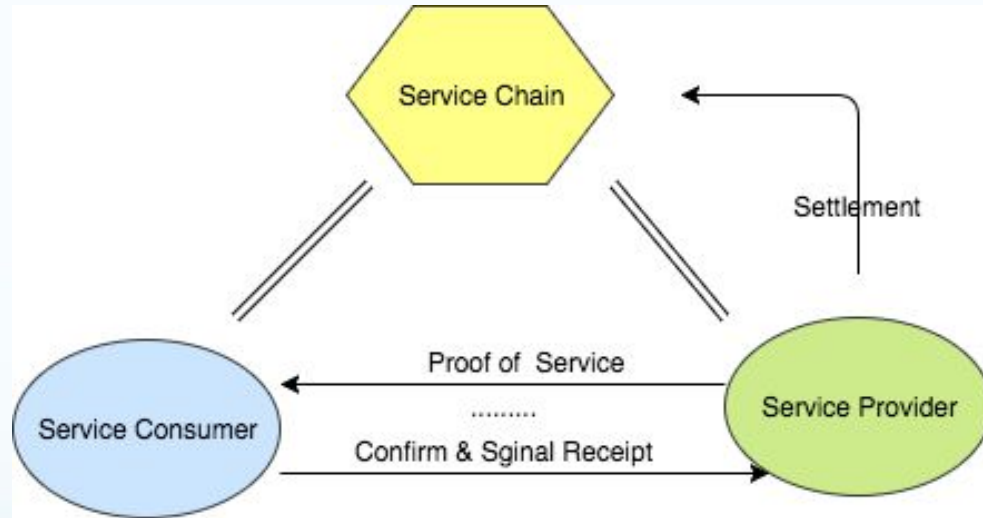

3 Layer Ledgers

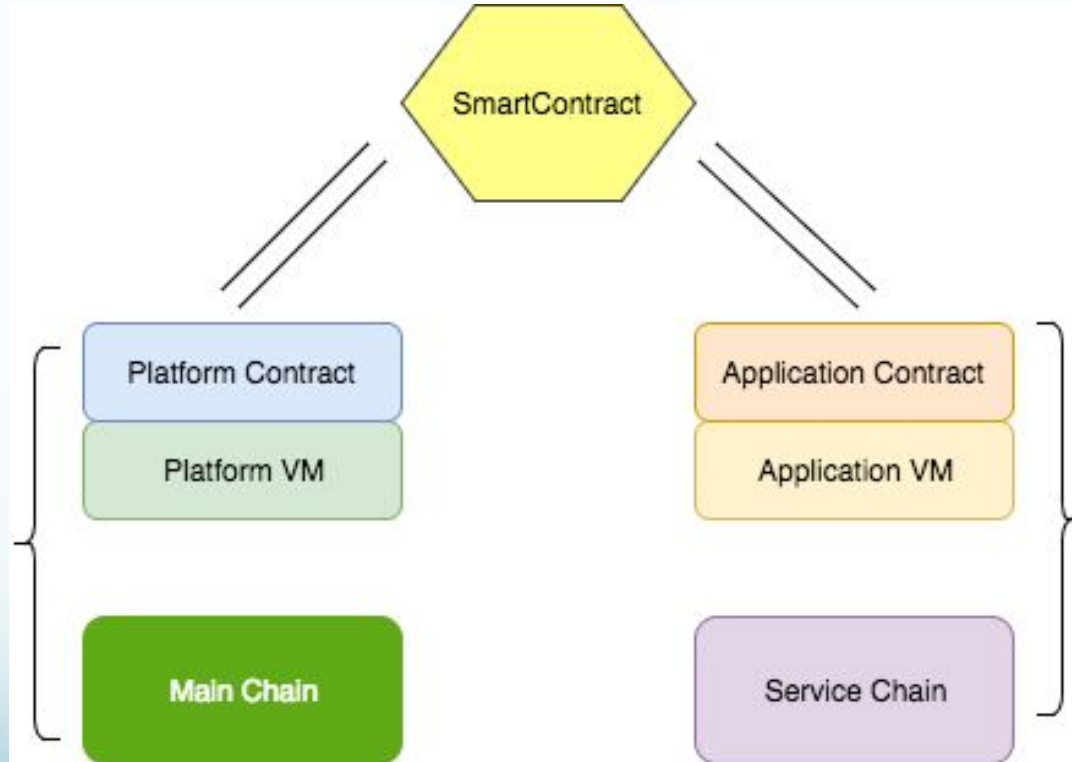

Multiple Service Chains

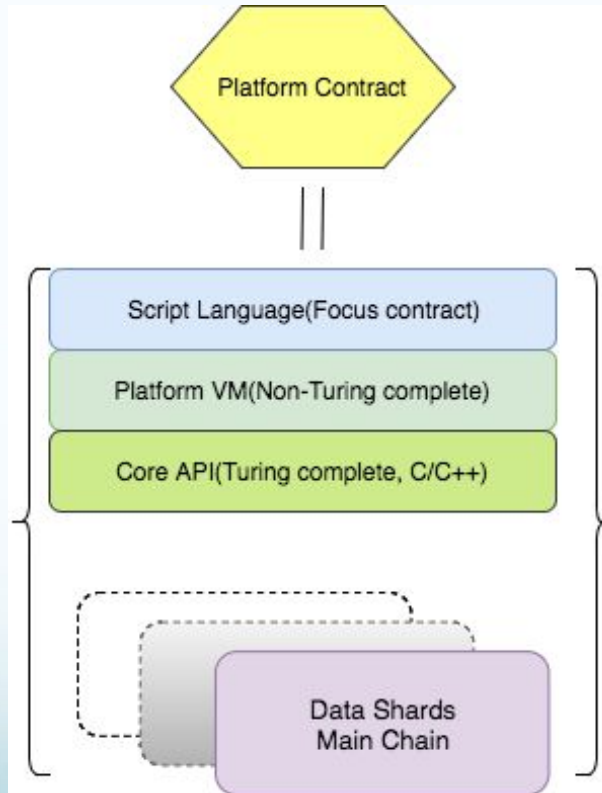

Simplify State Channel

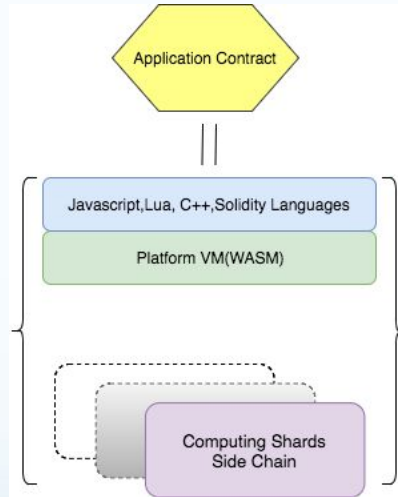

2 Layer Contract

Platform Contract

Application Contract

Layer2 Thinking

- Target for micro-value with high-frequency
- Good for service but not for financial
- General Layer2' solution is expensive
- What next for Layer2 solution
